

IPC DIGITAL Web Infrastructure Developer

We are looking for an Infrastructure Developer to help evolve our web hosting platform, to provide a dependable value-for-money development and hosting environment for IPC Media's web sites, such as: nme.com, instyle.co.uk, marieclare.co.uk, trustedreviews.com and nuts.co.uk.

You will be part of the Infrastructure team, who work closely with our web development teams; be aware of DevOps, therefore be able to contribute, communicate and maintain a positive attitude to challenges.

You'll help drive continual improvements of our infrastructure-as-code environments by designing Puppet manifests, automating services in AWS, improving release automation & orchestration, collecting metrics, developing monitoring solutions and carrying out performance tuning.

You should be as comfortable writing a tool that consumes an API as you are refactoring or creating puppet modules whilst understanding the challenges of running high traffic consumer facing web platforms.

Your enthusiasm & passion for new web technologies will help us find new ways of working and by utilizing the knowledge and experience of the team to decide on architecture you have the space to pitch and implement your ideas.

Based in an attractive office building near London's Southbank, the SysAdmins and Developers work closely together in an open plan space, making for a friendly, collaborative environment. The position is permanent, 35 hours a week, based upon a 0930-1730 working day that can be flexible, with on-call duties when you are comfortably settled in.

Essential Skills

The person we are looking for should be comfortable handling tasks that specify:

- Configuration Management, preferably Puppet 2.7+
- We prefer Ruby, but you could have Python/PHP/Java
- Linux administration, preferably RHEL/CentOS
- Distributed Source Control, preferably git/GitHub
- A good understanding of web security and performance issues
- CI/Build Systems/Release Automation/tool-chains
- Enthusiasm/passion for web technologies
- Good communicator, having the soft skills to talk to the business as well as techs

Desired Skills

Experience or knowledge of the following will be welcomed:

- LAMP stacks.
- CentOS/RHEL RPM packaging
- Puppet Hiera, Storeconfigs, mcollective etc..
- Amazon Web Services
- Vagrant, Docker, VMware
- Analytics and Monitoring
- Agile/Lean development practices
